

I successfully got the networking code to work across two computers. Next step is integrating the basic view and model together with a controller and then allowing it to communicate with each other. Note that this test was performed on my personal computers, and further testing will be needed to do it on the HS101 computers.

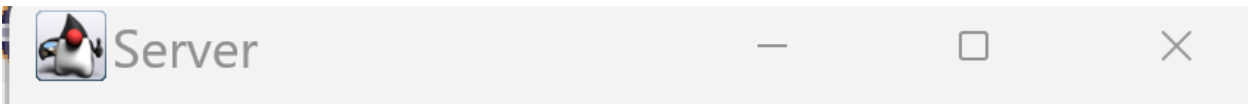

Attempting connection

Connected to: DYLANDESKTOP

Got I/O streams

SERVER>>> Connection successful

Waiting for connection

Connection 1 received from: LAPTOP-44B72MQJ

Got I/O streams

SERVER>>> Connection successful
